GBY Protocol (GBY) Whitepaper

Version 1.0 — May 2025

Abstract

GBY Protocol introduces a next-generation DeFi yield infrastructure focused on sustainability, cross-chain flexibility, and AI-driven optimization. Unlike traditional yield farming protocols, GBY prioritizes risk-managed, intelligent, and globally accessible strategies for long-term holders.

1. Introduction

The decentralized finance (DeFi) ecosystem is plagued by unsustainable yield models, high volatility, and a lack of transparency. Most yield-generating platforms rely on emissions-based incentives that dilute value over time and favor short-term speculation.

GBY Protocol aims to revolutionize this model by creating a protocol optimized for intelligent capital efficiency. Through its AI-assisted yield routing engine, secure smart vaults, and decentralized governance, GBY offers a more resilient and adaptive financial infrastructure.

2. Vision & Mission

Vision: Democratize access to intelligent, sustainable yield for anyone, anywhere.

Mission: Build a protocol that maximizes real yield through AI-powered vaults, bridging DeFi and real-world asset ecosystems, governed by a global community of token holders.

3. Technology & Architecture

GBY Vaults: A suite of vaults that aggregate, rebalance, and optimize yields from different protocols using machine learning algorithms.

CrossYield Layer: Enables interoperability between major chains including Ethereum, Arbitrum, and BNB, and plans to extend to tokenized real-world assets (RWAs).

Auto-Rebalance Engine: Dynamically allocates liquidity across pools based on risk-adjusted yield curves, governance votes, and AI signals.

4. Tokenomics

Token Name: GBY Protocol

Ticker Symbol: GBY

Total Supply: 888,000,000 GBY

Distribution:

- 30% Staking & Yield Incentives

- 20% Core Team (4-year vesting)

- 20% DAO Treasury

- 15% Strategic Partners

- 15% Public Sale

Utility:

- Governance participation

- Vault access privileges

- Fee rebates for long-term stakers

5. Use Cases

- Stake GBY for protocol governance and revenue sharing

- Vote on vault strategy parameters and yield targets

- Access to elite, AI-optimized DeFi strategies

- Collateral usage in lending and synthetic assets

6. Governance

GBY governance will operate under a hybrid DAO model:

- Token-weighted voting via Snapshot

- "Yield Parliament" — expert-curated vault proposals validated by community

- Auto-adjustments by AI co-governor for real-time vault optimization

7. Roadmap

Phase	Timeline	Key Milestones
Phase 1	Q3 2025	Testnet launch, AI vault simulator, website live
Phase 2	Q4 2025	Token launch, governance bootstrap, first staking vault
Phase 3	Q1 2026	RWA bridge launch, mobile app beta, first revenue share
Phase 4	Q2 2026	Cross-chain stable vaults, PoP NFTs, exchange listings

8. Security

- Audited by Certik and OpenZeppelin

- AI-enabled threat monitoring system

- Multi-sig treasury with community oversight

- Formal verification for vault contracts

9. Partners & Ecosystem

GBY will form strategic partnerships with leading DeFi platforms and real-world asset tokenization networks, including (placeholder):

- Chainlink (oracles)

- Maple Finance (underwriting)

- Centrifuge (RWAs)

10. Community Initiatives

- GBY Academy: Yield literacy programs in 12+ languages

- Ambassador Program for local DeFi evangelists

- PoP NFTs for early contributors and active voters

- GitHub Grants for vault developers

11. Appendix

- Glossary of technical terms

- Links to GitHub repository

- Future integrations & documentation roadmap

Join the GBY movement — Go Beyond Yield.
